Vortex is a highly engineered film that’s tough enough for your most demanding applications.

Sigma’s new Vortex film is tough. It’s been designed to handle the most demanding applications like hard to package “C” type loads, high speed ring wrappers for carpet and fibers, extraordinarily heavy pallets, or extremely valuable products that require exceptional unitization. Vortex is a highly engineered, co-extruded, one side cling blown film that combines superior extrusion technology with metallocene resins. Vortex—it’ll make even the most demanding applications seem like a walk in the park.

www.sigmastretchfilm.com
Vortex will provide exceptional load containment compared to conventional blown or cast films, making it a perfect fit with our Rite-Gauging® process. Vortex has extraordinary containment attributes and it’s significantly stiffer, with excellent puncture resistance compared to competitive products. Based on these unique properties, there is an outstanding opportunity for clients to reduce film thickness while increasing the containment force and improving their overall package.

Rite-Gauging is the application of the correct film, thickness, overlap, revolutions and force-to-load that ensures equal containment force to the top, middle and bottom of the pallet. Rite-Gauging sets the containment standard that is measurable, repeatable and cost/pallet effective. Rite-Gauging reduces risk and variance.
