

work SMARTER not HARDER

**Sigma Steel achieves the same containment
with MUCH less effort—at a lower cost.**

We're leading the pack:

- ◆ Steel uses **25-50% less effort** to stretch compared to competitor films.
- ◆ Our containment meets or exceeds that of other conventional hand films.
- ◆ Steel's yield is **at least 15% better** than the closest competitor.
- ◆ Our claims are based in science, using technologies developed in our packaging laboratories.
- ◆ Our unique manufacturing makes rolls with Easy-stretch characteristics. When force is applied to Steel, feels soft, then **"locks in"** outstanding containment and load retention. Why use comparatively thin, STIFF cast films when the key attribute to hand stretch film is stretch?

If you could use a fraction of the effort, without sacrificing containment—and save money, why wouldn't you?

Now, you can wrap with significantly less effort than conventional films, while sustaining containment. Save at least 15% on yield compared to other films. The reduction in force required to apply our hand film becomes painfully apparent over an 8-hour shift. **Call us and see for yourself.**
