

The **ULTIMATE CONTROL BREAK**

Admit it. You're just guessing how much stretch film it takes to secure your shipment.

You're not alone. Most end users don't understand how to properly use stretch film. It's an afterthought. **But now,** there's Sigma Pack-Rite Solution...

The total solution is based on our philosophy and methodology, combined with hardware, software, cloud computing and a specialized film offer.

Pack-Rite Process will...

Develop a standard that maximizes efficiencies in capital equipment utilization, labor, film usage and the appropriate containment levels to get more products to their destination in as-made condition.

The Pack-Rite System will...

- Maintain those standards utilizing hardware, software, our cloud and our film portfolio to ensure that your packaging operation runs to those standards
- **IF** there is variation, it will send alerts that "things" are out of standard so that they can be corrected
- The system will take the data from every pallet wrapped, and convert that data to information that can be sent to the client on a regular basis so that they can manage their film usage, etc.
- The Pack-Rite Solution has the capability to maintain the optimization that is developed during the assessment and settings of standards to improve overall equipment efficiency

Sigma Pack-Rite Measures

1. Pallet Sizes
2. Amount and cost of film used/pallet
3. Total on-pallet stretch percentage. Our data tells us if these measurements are within the standard, then the critical factor—**containment force**—will be too
4. Total Revolutions
5. Film Breaks

SIGMA PackRite FILM		P O R T F O L I O		
	Width (mm)	Microns	Length (m)	Weight (kg)
SIGMA PackRite WHITE FILM	500	12.8	2,800	16.4
	750	12.8	2,800	24.6
SIGMA PackRite GREEN FILM	500	14.1	2,550	16.4
	750	14.1	2,550	24.6
